

Title V New* Emission Source Information

The University's Title V permit requires all new emission sources installed be tracked, "permitted" and reported. Please provide the following information on all new emissions sources to be constructed. Obviously, until the equipment is ordered the equipment and serial numbers will not be available. This will require a two-part submission. The first submission should be as complete as possible and include a manufacturer spec sheet on each piece of equipment. This information needs to be submitted to Engineering Services as early as possible so an exemption or permit can be obtained. No combustion equipment may be operated until the exemption or necessary permits are obtained. Upon completion of the installation, the remaining information should be forwarded immediately.

Examples of these sources are 1) fossil fuel fired units including but not limited to boilers, heaters, generators, fire pumps, and hot water heaters and 2) process units that use chemicals including but not limited to paint booths, degreasing units, fume hoods, and metal plating. If you have any questions on defining emission sources, please contact Engineering Services for assistance.

NEW UNITS

Bldg.	Bldg. #	Equip.#	Fuel Type	Equip. Type	Mfr.	Model #	Serial #	BTU (Input)	Installation Date
Beecher-Dock	0655-000	BLR001	Nat Gas	HA	AO SMITH Genesis	GB650200	200F9738897	544,500	1-Jul-99

EXAMPLE

REPLACED UNITS

Bldg.	Bldg. #	Equip.#	Fuel Type	Equip. Type	Mfr.	Model #	Serial #	BTU (Input)	Installation Date

* Replacement of existing units is included in this requirement.

DeMinimis Sources? YES NO
